DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 4-5 of remarks, filed April 17, 2009 with respect to the 35 USC 112 1st paragraph rejection of claims 11, 13, and 14 have been fully considered and are persuasive. The 35 USC 112 1st paragraph rejection of claims 11, 13, and 14 has been withdrawn.
2. Applicant's amendment to claim 11, filed April 17, 2009, along with arguments on pages 5-9 of remarks is sufficient to overcome the 35 USC 103 rejection of claims 11 and dependent claims 12-20. The 35 USC 103 rejection of claims 11-20 has been withdrawn.

Allowable Subject Matter

3. Claims 11-20 are allowed.
4. The following, is an examiner's statement of reasons for allowance:
Referring to claims 11-20, the prior art taken alone or in combination, does not disclose, teach, or fairly suggest a pixel by pixel energy value comparison between luminance channel and the chrominance channels that is limited to first selected frequencies chosen from underfrequency ranges in order to detect pixels in which color moiré is present when the energy value in the chrominance channel is greater than the

energy value in the luminance channel. A telephone interview conducted with Joe Miller (Reg. # 61, 748) on July 29, 2009 has lead to an understanding that the energy value is a quantity of measure of the intensity of the pixel, and has support from paragraph 9 of the applicant's specification.

5. A full search of the prior art has yielded the art previously cited by the examiner in the office action sent out September 04, 2008. Examiner additionally cites the following references. US 4524380 (esp. col. 3, line 25 - col. 4, line 10) has a discussion of a low frequency converted chroma signal and a lower side band of the FM luminance signal, and color moiré disturbance and chroma leaks. US 3872498 (exp. Col 3 line 55 – col. 4 line 25) indicates brightness effects of midband chrominance signal components. US 4389665 (esp. col. 4 lines 40-60) discusses a case in which the energy of the luminance is smaller than the carrier chrominance signal, however, there is no indication of using this property in the reduction of color moiré. Additionally, US 6724932 and US 20040125411 yield related material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
